Improved Software Licensing Notification

July 24, 2018

Dear Valued Customer,

Thank you for choosing Hexagon PPM solutions as part of your technology landscape. We are pleased to announce an exciting productivity change that will improve your software experience.
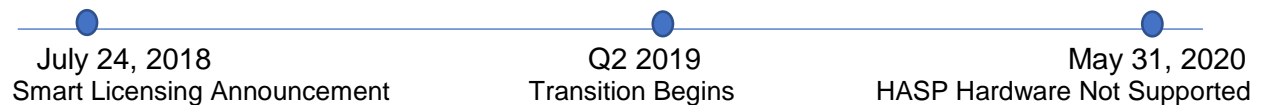

We've listened to your requests for improvements in license management and are excited to inform you that we will be launching a new, modern electronic product licensing method, Smart Licensing, early in 2019. This new licensing method will enable you to:

- Choose the running option that works best for you – standalone, network, or checked-out mode.
- Perform remote or offline work – you're no longer stuck to your desk.

Plus, no more locks to lose, and no more keeping up with install keys!

In anticipation of this new licensing method, you will soon begin to see that HASP hardware keys are date-limited to May 31, 2020. Beginning in Q2 2019, we will begin a 14-month program to transition current maintenance customers to this new licensing model. Your account representative will work with you on a transition plan.

July 24, 2018	Q2 2019	May 31, 2020
Smart Licensing Announcement	Transition Begins	HASP Hardware Not Supported

Any product licenses not currently on maintenance as of May 31, 2020, will become non-upgradeable and nonrenewable. At that date, all current software must be running the new electronic product licensing method.

You will receive more detailed information in the months to come about the new electronic product licensing. This letter is intended to ensure that you are informed of this upcoming change with as much advanced notice as possible.

Your reseller is happy to help verify your maintenance coverage or update your maintenance policy today.

Best regards,

Rick Allen
